Abstract (en)  
[origin: US2017049234A1] A device for moving a movable furniture part, including a force accumulator such that by way of the fitted device the furniture part under action of the force accumulator is capable of being put in the opening direction of the furniture part, wherein in a tensioned position of the force accumulator the force accumulator is charged for the opening movement of the furniture part. The device has a locking assembly having a displaceable locking member for locking the tensioned position of the force accumulator, wherein the locking member in the tensioned position assumes a locking position which is unlockable. The locking member in the case of an unlocking procedure is movable from the locking position in a releasing direction, wherein a transmission installation by way of which a movement of the locking member is transmittable to a functional unit which is spaced apart from the locking member is provided.
