Abstract (en)  
[origin: US2017049235A1] A device for moving a movable furniture part, the device including a force accumulator such that by way of the fitted device the furniture part under the action of the force accumulator is capable of being put in the opening direction, and wherein the device has a locking assembly for locking a tensioned position of the force accumulator, in which the force accumulator is charged for the opening movement of the furniture part, wherein the tensioned position is unlockable. A locking member of the locking assembly, and a movable lever of the device, which is coupled to the force accumulator, are present in an interacting manner such that in the locked tensioned position of the force accumulator, the locking member assumes a locking position, and the lever assumes a standby position in which cancelling of the standby position of the lever is blocked by the locking member.
