Abstract (en)

[Object] To propose an information processing device, an information processing method, and a program through which it is possible to easily switch a connection mode in an external device having a function of switching a connection mode. [Solution] An information processing device includes a control unit configured to, in a communication form in which a plurality of slave units are connected to one master unit through a wireless communication channel, instruct an external device to switch a mode from one mode to the other mode between a first mode in which an operation of the master unit is performed and a second mode in which an operation of the slave unit is performed, and an acquisition unit configured to acquire information indicating a connection state between the external device and a connection destination of the external device according to switching of the mode.
