Abstract (en)

[origin: WO2015162304A1] A metal sheet (1) and a method for improving the deformability of a metal sheet (1) are shown, in which method, prior to the deformation of the metal sheet (1), an aqueous solution comprising polyvinyl alcohol is applied to the metal sheet (1) and is then dried and, in a subsequent step, the thus coated metal sheet surface is oiled. In order to be able to reproducibly create an especially advantageous deformable metal sheet (1), it is proposed that an aqueous solution comprising polyvinyl alcohol, optionally a defoaming agent, optionally a tracer, and the rest water and unavoidable contaminants of the manufacturing process, by applied and dried on the metal sheet (1).
