Abstract (en)
[origin: WO2015139069A1] A separator for insertion between building construction sheets for externally cladding buildings has a handle part securable to an existing sheet and a spacer bar which overlies the edge of a sheet in order to project into the path of an incoming sheet and space it from the existing sheet. The handle and spacer bar are made of metal. Four are required for insertion at two adjacent edges of a building sheet.
