Abstract (en)

[origin: WO2015162006A1] The invention relates to a system (1) for measuring the composition of a liquid by LIBS, wherein the liquid circulates in a measuring cell closed by a window (2). The cell comprises means (3) for protecting the window (3) from spray of the liquid. The cell according to the invention allows the in-line analysis of any type of liquid (viscous or not) and is suitable for measuring different compounds contained in the liquid.
