Abstract (en)
[origin: WO2015162210A1] The invention relates to a conductor connection clamp (1) comprising at least one conductor clamp element (3) which is formed integrally from one sheet metal section and has a base section (10), a spring bow (11) connected to said base section (10), and a clamping limb (12) that is connected to said spring bow (11) and lies opposite the base section (10). The free clamping end (13) of the clamping limb (12) forms a clamping edge for clamping to an electrical conductor (4). An end section (14) of the base section (10), lying opposite said spring bow (11), extends towards the clamping limb (12) from the plane spanned by the base section (10) and forms an overload stop for said clamping limb (12).
