Abstract (en)

[origin: EP3135130A1] A finished smokable product is formed using a booklet of smoking rolling papers comprising: (a) a plurality of smokable sheets being stacked together each sheet having first and second longitudinal edge portions along with first and second lateral edge portions, and first and second faces, and a plurality of openings adjacent the first longitudinal edge portion, and the first longitudinal edge portion having a first length, and the first lateral edge portions having a first length; (b) wherein the plurality of sheets are bound together by a plurality of connecting loops; (c) wherein the plurality of openings have bound and unbound states, wherein in the bound state the openings are unbroken and have a mean diameter opening and mean spacing between unbroken openings, and in the unbound state the openings are broken open with the mean spacing remaining constant but the first lateral edge portion having a second length, the second length being greater than the first length of the first lateral edge portion; and (d) wherein the bound plurality of sheets and plurality connecting loops are packaged for sale.
