Abstract (en)
A package i(10) ncludes a container (12) and a lid (14). The container includes a body (46) formed to include an interior product-storage region (22) and neck (24) coupled to the body and formed to include a mouth opening (48) into the interior-product storage region. The lid is coupled the neck of the container and formed to include a portion of a droplet passageway (28,30) therein which is arranged to extend along a longitudinal axis of the lid. The droplet passageway is adapted to communicate a droplet of fluid from the interior region to environment surrounding the package.
