Abstract (en)
[origin: US2015305533A1] The present invention is directed to a set of tableware for use by persons with neuro-cognitive impairment, compromised or under developed motor skills, or any persons with difficulties eating foods and imbibing drinks. As described herein, the tableware set includes at least one container and at least one spoon. The container has a smooth sidewall portion, a vertically slanted basin portion to define an asymmetrical cavity enclosed by the container. A flat base is provided on the underside of the container. A spoon is provided to match the curvature of the container along or more axes. To assist disabled persons with using the spoon, the side edges of the spoon matches the vertical curvature of the sidewall container, and the tip of the spoon matches the horizontal curvature. The handle of the spoon is designed along an arc to match the alignment of a closed hand when holding a spoon.
