Abstract (en)
[origin: WO2015166023A1] The invention relates to a dispensing device comprising at least one locking means having a housing and a housing insert, wherein the locking means has at least one first state and one second state, wherein the at least one first and one second state of the locking means can be converted by a rotation of the housing insert in a first direction, and the locking means has at least one fixing pin and at least one restoring means, wherein the at least one restoring means in the second state has at least to some extent a different orientation relative to the at least one fixing pin than in the first state, and the at least one fixing pin in the second state is in direct contact with the at least one restoring means.
