Abstract (en)

[origin: WO2015166029A1] The problem addressed by the invention is that of providing an output device that provides improved removal of a planar product accommodated in the output device. This problem is solved in that the output device comprises a cover part, a housing part, and a removal opening, wherein the removal opening is bounded at least partially by a set of teeth arranged on the cover part and wherein the set of teeth comprises at least two tooth heads, between which a tooth gap having a tooth base is formed, on which tooth heads at least one treating tip is arranged.
