Abstract (en)

[origin: CA2946208A1] The horse snaffle bit has two side rings (20, 22) and a shackle (24), arranged therebetween, which has either two links (26, 28) and a central portion (30) or one link (26). The shackle (24) has two side portions. Each side portion (29, 31) has an end that is remote from the at least one link (26, 28) and has an annular bore (32) for receiving in each case one of the rings (20, 22) in a freely movable manner, and has the following regions in the specified order: - a lip region (60) which immediately adjoins the annular bore and has a substantially round cross section, - a transition region (62), - a protruding region (64) which forms a substantially non-round cross section and a forwardly directed control edge (66) which has a length of 6 to 30% of the bit width. The transition region has a continuous, soft progression from the substantially round lip region to the non-round protruding region.
