Abstract (en)
[origin: WO2015165853A1] A light strip system comprises an elongate carrier arrangement formed by mounting rail elements (1, 2) that are open towards the lower face, a profiled part (4) which consists at least partly of a flexible material and forms an accommodation space (6) formed in the carrier arrangement and extending in the longitudinal direction, and a lighting module component (8, 8') arranged in the accommodation space (6). In order to hold the lighting module component (8, 8') it is arranged so as to push against contact regions (11, 12, 11', 12') of the carrier arrangement, on two opposite sides, each time with the interposition of regions of the profiled part (4).
