Abstract (en)

[origin: WO2015165799A1] The present invention relates to a nozzle device for treating a flat steel product. Said nozzle device comprises an outer tube and an inner tube arranged inside said outer tube, the inner tube having a primary opening for feeding a gas flowing through the nozzle device to an outer tube, and the outer tube having a secondary opening for the gas to exit from the nozzle device in the direction of the flat steel product, the primary opening and the secondary opening being arranged offset to one another along a circumferential direction.
