Abstract (en)

[origin: WO2015168602A2] The present invention relates to the determination of levels or expression of particular biomarkers in biological samples which can be utilized to diagnose, prognose, and treat Kawasaki disease in subjects, and further to select subjects who would benefit from a Kawasaki disease therapy other than, or in addition to, IVIG treatment. Accordingly, the present invention encompasses methods and compositions that utilize these biomarkers for the diagnosis, prognosis, and treatment of Kawasaki disease.
