Abstract (en)

[origin: WO2015166171A1] The invention relates to an inlet fitting (1) for electrical conductors (331, 351) in an electrical box (200), comprising: a base (10) for securing to a component (210) of the electrical box, defining an opening for the passage of electrical conductors, and a first conduit (30) extending from the securing base and comprising means (35, 37) for connecting to a routing sheath (330) for routing electrical conductors. According to the invention, the fitting also comprises a second conduit (50) extending from the securing base and comprising means (57) for connecting to another routing sheath (350) for routing electrical conductors, the orientation of one free end part (52, 54, 56) of said second conduit being adjustable in relation to the securing base.
