Abstract (en)

[origin: WO2015166152A1] The invention relates to an electronic circuit for controlling at least one first light source (D11) and a second light source (D21), comprising a generator (GEN) of a pulse-carrier signal (PWM1) of variable duty ratio, characterized by means designed to turn on the first light source (D11) in accordance with the pulse-carrier signal (PWM1) during a first time interval and to turn on the second light source (D21) in accordance with the pulse-carrier signal (PWM1) during a second time interval (T2).
