Abstract (en)

[origin: US2017051547A1] A device for opening and closing a movable furniture part such as a drawer, door or shutter, includes a push-out unit having at least one push-out element and a rechargeable energy storage element connected to the push-out element via a coupler, such that when the movable furniture part is pushed a specified or definable distance into the energy storage element, stored energy can be made available as kinetic energy in order to eject the movable furniture part. The coupler comprises a lever system with a plurality of levers connected to each other in an articulated manner via levers.
