Abstract (en)

[origin: EP3138445A1] Described is an equipment for adjusting support feet (11) for furniture units wherein each foot comprises a rule (12) rotating about a main axis of extension of the foot operatively connected to a system for varying the height of the foot relative to a supporting surface so that the height of the foot is varied by rotating the rule, the equipment comprising a rotary bar (13) extending between a relative operating end and a relative movement end (26), first drive means (15) positioned at the operating end of the bar and designed for being moved by means of a rotation of the bar on itself and second drive means (19) located at the rotary rule (12) of a support foot (11) and configured to rotate the latter.
