Abstract (en)  
[origin: WO2015170077A1] The present invention relates to a retail product shelf arrangement for displaying a plurality of retail products in a retail environment. The invention includes a first product support platform, a second product support platform which is wholly supported by and positioned beneath the first product support platform. The second product support platform is moveable between a stowed and extended configuration such that one or more products can be temporarily supported on the second product support platform when in the extended configuration. A support arrangement is provided and comprises at least one guide secured thereto for supporting and guiding the second product support platform and the guide comprises an interruption or latch and the second platform comprises the other of an interruption or latch, the interruption arranged to receive the latch in the stowed configuration. The latch is arranged to co-operate with the interruption to prevent linear withdrawal of the second product support platform from the stowed configuration.
