Abstract (en)  
[origin: WO2015171143A1] Provided herein is a placental membrane product comprising an immunocompatible chorionic membrane. Such placental membrane products can be cryopreserved and contain therapeutic factors and viable cells after thawing. The placental membrane products are useful in wound healing or tissue repair/regeneration as they are capable of promoting angiogenesis, reducing inflammation, reducing scar formation, and other methods that promote healing. The present technology relates to products to protect injured or damaged tissue, or as a covering to exclude bacteria, to inhibit bacterial activity, or to promote healing or growth of tissue. The field also relates to methods of manufacturing and methods of use of such membrane-derived products.
