Abstract (en)  
[origin: WO2015169611A1] The invention relates to a weft feeder device with a winding drum (2) having an adjustable winding circumference for storing weft thread (10) and a center axis (4), the winding drum (2) comprising a base structure (5) and at least one moveable finger (7, 8, 9), wherein the at least one moveable finger (7, 8, 9) is mounted on the base structure (5) so as to be moveable over the full length of a linear movement path, wherein the at least one moveable finger (7, 8, 9) comprises a first leg (50), a second leg (51) and a segment (52) connecting the first leg (50) and the second leg (51), wherein the first leg (50) and the second leg (51) are extending parallel to the movement path and wherein the first leg (50) and the second leg (51) are offset from each other in the direction of the center axis (4).
