Abstract (en)
[origin: WO2015169641A1] The invention relates to a domestic appliance (1) for washing laundry items, comprising a drum (4) for receiving the laundry items, said drum being mounted in a rotatable manner about a horizontal axis (A), and a support star (13) which is arranged behind a rear wall (14) of the drum (4) when seen in the direction of the axis (A) and which is connected to the drum (4) and has a plurality of radially extending support arms (15). A respective spacing (d) is formed between each of the support arms (15) and the rear wall (14) in the axial direction such that a continuous flow gap (16) is formed between each support arm (15) and the rear wall (14) when seen in the circumferential direction about the axis (A), and the flow gap (16) is delimited on the support arm side by a wall (17) which has a first wall section (18) that is oriented at a first angle (α) between 20° and 70° relative to a plane (E) extending perpendicularly to the axis (A).
