Abstract (en)

[origin: EP3141145A1] This invention refers to a system formed by a rotational movement circular device for nail varnish remover, consisting of a pattern made of polyethylene or polypropylene or material with a similar consistency and soft texture and a part made of spongy material with an inner circular cut used together, placed inside a jar which is not higher than the average length of the fingers of the hand with its respective lid (10) containing nail varnish remover liquid. The system can be used domestically and/or commercially that allows the removal of the enamel or varnish or polish of the type used on nails used on the nails allowing to remove the nail varnish from the five nails of the fingers of the hand at once in shorter period of time and with a higher level of efficiency and comfort and also allowing a better use of both the nail varnish removal liquid and the surface of the part of spongy material for rubbing the finger nails.
