Abstract (en)

The package-sealing device comprises a sealing element provided with an outlet, the walls of the outlet being in contact with each other, making it close. According to a preferred embodiment, the package-sealing device comprises a closing element, and the sealing element is made up of a flexible sheet, being said sealing element partially attached to the closing element, such that the sealing element deforms when the closing element is removed, thus defining an outlet and closing it when the walls of the outlet are in contact with each other.
