Abstract (en)  
An edge seeking and guiding device of a fabric for infeed by means of chains into a fabric treatment area, comprising, for each of the two edges of the fabric: a) a chain for moving the fabric, b) holding elements for the edge of the fabric associated with said chain, c) guide means for said chain along its feed path, provided with i) a head part, sliding to follow the variation of the position of the edge of the fabric, ii) and a tail part, substantially fixed with respect to the ground, with said guide means adapted to allow an angular variation of the direction of said feed path of the chain.
