Abstract (en)

An air conditioner includes a main body portion in which an air outlet is formed and a main body side mounting hole is formed, a flap which is provided in the air outlet to change a direction of air blown from the air outlet, and a connecting member (21) which rotatably connects the flap with respect to the main body portion. The connecting member (21) includes a mounting hole insertion portion (25) which is inserted into the main body side mounting hole, a flap connecting portion (26) which is formed at one end portion of the mounting hole insertion portion (25) and is connected to the flap, and an elastic deformation portion (30) which at least partially swells radially outward from an outer circumferential surface of the mounting hole insertion portion (25) and is elastically deformable in the radial direction.
