Abstract (en)
[origin: EP3141837A1] A water boiler (1) comprises a water container (2) having side walls defining a sealed volume (V) within which water may be received and heated, at least one of the side walls (3) being removable to provide access to the volume (V). The removable side wall (3) is configured to receive and locate a heating element (9) such that removal of the removable side wall (3) effects a corresponding removal of the heating element (9). The heating element (9) is a planar heating element extending substantially perpendicular to a major axis of the water container (2).
