Abstract (en)
[origin: EP3142092A1] According to the invention, integrated in each regulated parking space (1) is a space-monitoring device (2) having the corresponding control electronics associated with a radio frequency communications module, and with a sensor (a) for detecting vehicles, such that the different space-monitoring devices (2) communicate via radio frequency (d) with the area-controlling device (3) where all the information regarding the spaces assigned to said area is centralized, said area-controlling device being provided with a telematic network (telephone line, ADSL, Wi-Fi, etc.) from which the corresponding system operations are carried out, as well as the bank transactions and communication with a control centre (6). The users can pay via an application installed on their mobile telephone, via a device similar to those used in electronic toll payment systems, or via a chip, RFID card or circuit integrated into the vehicle and associated with the radio of same.
