Abstract (en)  
[origin: WO2015173170A1] A poultry feeding system comprises walls (9) which together delimit a feeding space which at its upper side is accessible for poultry via a feeding opening (10). A feed supply is provided for supplying feed at an inlet position into the feeding space, such that poultry is able to pick feed out of the feeding space. The walls (9) are at least partly provided with an abrasive surface structure (20) that comprises a pattern of a plurality of sharp-edged line-elevations (23) for having beaks of the poultry abraded and worn as they pick feed out of the feeding space.
