Abstract (en)
[origin: WO2015173139A1] The invention relates to an inclined floor shelving unit (1) having a shelf body (2) having at least one inclined shelf (3) which drops away to the removal side (5) and has an abutting element holding a placed object (17) on the bottom end thereof, wherein the at least one inclined shelf (3) is held to the shelf body (2) via guide rails (9) and is designed as a pull-out running on the guide rails (9) which can be pulled out to the removal side (5) and having a spring device (19) for decelerating the inclined shelf (3) during the pull-out, which operates between the shelf body (2) and the inclined shelf (3). According to the invention the spring device (19) has a connection element (21) which has a first connection section (21a), which is connected to the shelf body (2) in an operating position by means of a holder (23), and which has a second connection section (21b), and the inclined shelf (3) has a fastening holder (25) to which the connection element (21) is fastened via the second connection section (21b) in an assembly position, wherein, upon pushing in the inclined shelf (3) with the connection element (21) in the assembly position, the first connection section (21a) engages on the holder (23) and wherein the second connection section (21b) is removable from the fastening holder (25).
