Abstract (en)

[origin: WO2016134708A1] The invention relates to a method for determining the driving behavior of a driver of a vehicle, in particular in urban transport or in inner-city traffic, preferably for use in vehicle fleets, in which at least one parameter describing the driving behavior is determined. Said method is characterized in that the position of the accelerator pedal is determined as a parameter over time. A device for carrying out the method further comprises a sensor system (1).
