Abstract (en)

[origin: WO2015175717A1] A cap for a container includes a base portion that connects to the container, the base portion including a mouthpiece in fluid communication with an internal cavity of the container, a content reservoir system disposed on the base portion and in selective fluid communication with the internal cavity of the container, the content reservoir system including a valve such that the content reservoir system is in fluid communication with the internal cavity when the valve is in an open state and such that the content reservoir system is not in fluid communication with the internal cavity when the valve is in a closed state, and an actuating portion that actuates the valve between the closed state and the open state to selectively open the internal cavity of the container.
