Abstract (en)  
[origin: WO2015172949A1] The invention relates to a device (10) for adjusting the position of a packaging material path (1, 1'), in particular the path center (2, 2') of the packaging material path (1, 1'), relative to a reference (103) in a packaging machine. According to the invention, two devices (21, 26) are provided for adjusting the position of the packaging material path (1, 1'), the first device (21) being designed to linearly move the packaging material path (1, 1') in a direction running perpendicularly to the transport direction (23) of the packaging material path (1, 1') and the second device (26) being designed to pivot the packaging material path (1, 1') about an axis (28) arranged perpendicularly to the transport direction (23) of the packaging material path (1, 1').
