Abstract (en)
[origin: WO2015173297A1] The invention relates to a bearing assembly for a door (2) of an item of furniture or household appliance (1), in particular for refrigerators or freezers, comprising: a bearing element (6), that can rotate about a bearing axis (4), for rotatably mounting the door (2) on a body (3) of the item of furniture or household appliance; a closing system (20), attached to the body (3) of the item of furniture or household appliance or to the door (2), by means of which the door (2) can be moved through a certain pivot range in the closing direction using a drive part, said closing system (20) having the drive part (11) and a first rotary element (7) which has an axis of rotation (71) that is substantially parallel to the bearing axis (4) of the door (2) and which supports a rotary movement of the door (2) about the bearing axis (4), wherein the first rotary element (7) and the door (2) are connected to one another via a compensation system for compensating for a misalignment between an axis of rotation (71) of the first rotary element (7) and the bearing axis (4) of the door (2).
