Abstract (en)
[origin: ES2606718A1] The invention relates to a domestic appliance device (10) with at least one cooling body (12) for cooling at least one constructive unit (14), with a fan unit (16) for providing cooling air to the body of cooling (12) in at least one operating state, and with a channel unit (18) for directing the cooling air exiting the fan unit (16) at least in the direction of the cooling body (12). To provide a home appliance device with better construction properties, it is proposed that the channel unit (18) has a first channel element (20) and a second channel element (22), different from the first channel element (20), which largely or completely conforms a channel together with the first channel element (20) by sections in the assembled state.
