Abstract (en)

[origin: US2017098838A1] The invention relates to a method for determining a spatial distribution (k_x, y_f) of a parameter of interest (k) representative of a permeability of a diffusion layer of at least one electrode of an electrochemical cell, comprising steps in which a spatial distribution (k_x, y_f) of the parameter of interest (k) is determined depending on the spatial distribution (Q_x, y_e) of a second thermal quantity (Q_e) estimated beforehand from the spatial distribution (T_x, y_c) of a set-point temperature (T_c) and from the spatial distribution (D_x, y_r) of a first thermal quantity (D_r).
