Abstract (en)
[origin: WO2015176088A2] The invention relates to an ECG device (1) having at least one input (2) for an electrical ECG signal, wherein the input (2) is connected to a low pass filter (3) having a threshold frequency of at least 1 kHz, and an output of said low pass filter (3) is connected to an input of an analog to digital converter (4) having a sampling rate of at least double the threshold frequency of the low pass filter.
