Abstract (en)

[origin: WO2015177176A1] The invention relates to an extruder, which has a block-feeding device (1) for linearly loading a block (3), which is to be pressed in an extruder (2), said block-feeding device having a frame (5) comprising a linear guide apparatus (8; 108; 208; 308; 408) and having a loading slide (9; 109; 309; 409), which is arranged on the linear guide apparatus (8; 108; 208; 308; 408) in such a way that the loading slide can be linearly moved in a longitudinal direction of a linear guide path (11), wherein the loading slide (9; 109; 309; 409) comprises an entraining part (14) for retaining the block (3) to be loaded, and wherein the block-feeding device (1) is distinguished by a multi-part loading slide (9; 109; 309; 409) having at least a lower slide part (15; 115; 215; 315; 415) linearly displaceable in relation to the linear guide apparatus (8; 108; 208; 308; 408) and additionally having an upper slide part (16; 116; 216; 316; 416) linearly movable both in relation to the linear guide apparatus (8; 108; 208; 308; 408) and in relation to the lower slide part (15; 115; 215; 315; 415).
