Abstract (en)

[origin: WO2015172926A1] The protection screen (10; 10A; 10B) is partially inflatable to get its own configuration of use and is formed of a material that enables it to roll up onto itself whenever it is deflated. The non-inflatable part (24, 26; 26A; 26B) of the screen (10; 10A; 10B) is at least partially formed of a sheet (26; 26A; 26B) made of a plastic material of such a type that, the screen being rolled up, if heated up to a determined temperature which depends on the type of the plastic material and subsequently cooled down, keeps a memory of its own rolled up condition, so as to make the screen (10; 10A; 10B) automatically roll up onto itself whenever it is deflated and left free.
