Abstract (en)
[origin: WO2015176722A1] The invention relates to a torsional vibration damper, in particular a two-mass flywheel (100, 200), comprising an input part (102, 202) and an output part (104, 204, 206) with a common axis of rotation, around which the input part and the output part are rotatable together and are rotatable to a limited extent relative to each other by means of a rolling bearing (110), wherein the rolling bearing has an outer ring (112), an inner ring (114) and a plurality of rolling bodies arranged between the outer ring and the inner ring. The inner ring comprises at least two inner ring parts (124, 126) which are produced in a structurally separate manner in order to structurally and/or functionally improve the torsional vibration damper.
