Abstract (en)

A device for the laying of tiles or the like comprising: a tie-rod (1; 101) having a support base (3) for adjacent tiles and a projecting element (4) from said base (3) and susceptible to project from the level of the tiles through the escape hatch, between the base (3) and the projecting element (4) being interposed at least one breakage portion (8) to promote the total separation of the projecting element (4) from the base (3); a pressure element (10) removably coupled to the tie-rod (1; 101) on adjacent tiles so as to keep them coplanar. The projecting element (4) comprises a first portion (5; 105) susceptible to be arranged into the escape hatch between adjacent tiles and having a portion with increased thickness (20) to constitute a spacer for such tiles, the first portion (5; 105) comprising a first plate (6a; 106a) whereon a portion with increased thickness (20) is formed, and a second plate (6b; 106b) incident on the first plate (6a; 106a) and whereon a portion with increased thickness is formed.
