Abstract (en)

[origin: EP3148218A1] The present invention relates to an acoustical module comprising a receiver unit for generating audio sound, a plurality of microphone units for receiving acoustical pressure signals, a plurality of acoustical pressure pick-up points, each of said acoustical pressure pick-up points being acoustically connected to a microphone unit, and an acoustical filter for attenuating acoustical pressure signals from a first acoustical pressure pick-up point relative to a second acoustical pressure pick-up point. The invention further relates to a hearing device comprising an acoustical module.
