Abstract (en)
[origin: WO2015180729A2] The present disclosure relates to a stirring system, comprising: a receptacle comprising an inlet part and an outlet part for a liquid, wherein said outlet part is forming a mixing chamber; a base unit comprising a rotating unit comprising a magnetic member; a blocking unit comprising an outer surface configured for being mounted between said base unit and said receptacle such that said outer surface forms a connecting surface of said receptacle such that said connecting surface is fluid-tight; a magnetic stirrer located on said outer surface such that it is able to rotate on an axis of rotation normal to a part of said outer surface, and configured for being driven by said magnetic member when magnetically coupled to said magnetic member.
