Abstract (en)
[origin: CA2949432A1] The invention relates to a device for sealing an opening in a wall, which includes: at least one flexible, deformable balloon (3); a locking means (1), which is a bar that is slidable into the opening (9) of the wall (8) from one side (10) of the latter and engages with the opposite side (11) of said wall (8); a bearing means (4) that is a circular plate capable of bearing on the at least one balloon (3) and of sandwiching same against the wall (8); and a connection means (2), which is a flexible rope located between the locking means (1) and the bearing means (4), passes through an inner duct (12) of the balloon (3), and is capable of compressing the balloon (3) against the opening (9).
