Abstract (en)

[origin: WO2015181501A1] The invention concerns a method for obtaining a material comprising a transparent substrate coated with a stack of thin layers comprising at least one functional metal layer made from silver located on top of at least one anti-reflective coating, the transparent substrate coated with the stack being intended to withstand heat treatment at a temperature T_{max} greater than 400°C, the anti-reflective coating comprising at least one dielectric layer likely to generate hole defects, the method comprising the following sequence of steps: - depositing the anti-reflective coating comprising at least one dielectric layer likely to generate hole defects on the transparent substrate, then - subjecting the dielectric layer likely to generate hole defects to a heat pretreatment, then - depositing said at least one functional metal layer made from silver.
