Abstract (en)  
[origin: WO2015181319A1] The invention relates to a lock (1) for an openable body section of a motor vehicle including: a lever (10) for opening said openable body section intended for allowing the opening of the openable body section; a locking means (12) configured to adopt an operative locking position in which said locking means (12) locks said opening lever (10) and an inoperative position in which said locking means (12) allows the movement of said lever (10); a resilient locking return means (14) configured so as to move said locking means (12) from the inoperative position to the operative locking position; and a triggering means (16) configured so as to adopt an inoperative position in which said triggering means (16) locks the locking means (12) in the inoperative position thereof and an operative unlocking position in which said trigger (16) releases said locking means (12) in order for the later to pass from the inoperative position to the operative locking position, the opening lever (10) including a driving means (11c) configured to move the locking means (12) from the operative locking position to the inoperative position when the opening lever (10) pivots towards the direction in which the openable body section opens.
