Abstract (en)
[origin: WO2015180980A1] The present application relates to a steamer head comprising a treating face (13A, 33A) from which steam is expelled, and a steam generating surface (14A, 34A) onto which a liquid is provided to be converted into steam. The treating face (13A, 33A) is in thermal conductive communication with the steam generating surface (14A, 34A). The steam generating surface (14A, 34A) is at an angle to the treating face (13A, 33A) such that when the treating face (13A, 33A) is orientated vertically, the liquid is able to descend onto and flow along the steam generating surface (14A, 34A) to be converted into steam.
