Abstract (en)  
[origin: US2015346780A1] Techniques for fabric lamination to a component are described. According to various implementations, a single piece of fabric is laminated to a moveable component and to an apparatus to which the moveable component is attached. Generally, lamination of fabric to a moveable component and portions of an associated apparatus can enhance a user experience in a variety of ways. Embodiments may also be employed to cut fabric from around a surface component of an apparatus.
